## Brief Introduction

### Galanz Group Profile

Established year: 1978  
No. of employees: 42,000  
Turnover: 3.6 billion USD (2009)  
Main products:  
air conditioner, refrigerator  
washing machine, wine cooler  
microwave oven, rice cooker  
electric oven, induction cooker, kettle...

### Galanz Air Conditioner Profile

Established year: 2000  
Factory size: 2,000,000 m<sup>2</sup>  
No. of employees: 12,000  
Production capacity: 5 million sets per year  
Vertical integrated production:  
assembly, heat exchanger, PCB,  
motor, compressor, metal parts,  
plastic parts, molding, etc.

# Health & Environment

## Total Air Solutions

Air conditioners made not only to cool and heat, Galanz wall split offers you total solutions to indoor air quality.

### Clean Warning

After a long time of using an air conditioner, the filters inside get dirty and polluted by covering with dust, house mites, bacteria, etc. Clean Warning function can automatically give you a signal to clean the filters when they get dirty and polluted.

### Air Quality Detector

The air quality detector can detect various room air pollution like formaldehyde, benzene, smoke, etc. If the pollution reaches a certain level which may do harm to people, the indoor unit will give the user a warning signal.

### Plasma Filter

The Plasma can create an ionization zone. When the polluted air gets through the ionization zone, the microscopic contaminants can be eliminated efficiently. It can reduce not only the dust, but also smoke, house mites, pollen, pet fur, and then reduce user's allergy and asthma symptoms.

### Golden Fin

It is an anti bacteria and anti corrosive coating on heat exchanger. It can prevent bacteria and germs breeding inside, and withstand the salty air, dirty water and other corrosion as well.

### Ionizer

Ionizer can create more than 1,000,000/cm<sup>3</sup> anions, which can stimulate the blood circulation system, improve lung function and prevent respiratory passage illnesses.

# Health & Environment

## Light Wave

Light Wave is Galanz exclusively owned bacteria killing technology. The light wave generator can create a kind of light wave in 750-1000nm length, which can efficiently kill the bacteria both inside the evaporator and in the airflow. Bacteria DNA can be broken and converted into CO<sub>2</sub> and H<sub>2</sub>O, so there is no second pollution to the air. The authority testing has indicated the bacteria killing efficiency can reach 99.43%.

Patent No: ZI031138667

## Fresh Air

After a long time of staying in the room, the room air quality will drop a lot with the increase of CO<sub>2</sub> and bad odors like sweat, smoke, etc. Fresh Air function can take the polluted indoor air outside and then supply fresh air from outdoor.

## Auto Clean

One of the main causes of odors emitting from an air conditioner is the mould and bacteria breeding on the evaporator. Auto Clean function can clean the evaporator automatically and reduce the possibility of mould and bacteria breeding inside the air conditioner. On the other hand, cleaning evaporator helps the air conditioner keep working efficiently and save energy.

## Nano Silver Cross Fan

There is a nano silver coating on the indoor cross fan. It can suppress bacteria breeding efficiently.

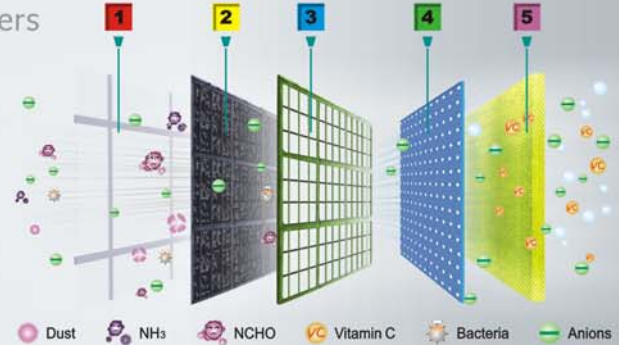

## Multi-Filters

Multi Filters System can provide you different kinds of filters to secure the indoor air quality. It includes Nano Silver Filter, Active Carbon Filter, Bio Filter, Vitamin C Filter, etc. Multi Filter can efficiently eliminate dust and kill different kinds of bacteria. Also Vitamin C Filter can bring VC into your room air.

## Multi-Filters

## Anti-Dust Filter

Dust filter is the traditional filter which can catch most small dust particle and easily to be washed and cleaned.

## Active Carbon Filter

Active carbon electrostatic filter can absorb many kinds of odors such as Ammonia(NH<sub>3</sub>) and deactivate harmful chemical gas such as formaldehyde(HCHO). It can also absorb small dust particle, smoke and prevent allergic diseases.

NH<sub>3</sub> Removal Ratio of Active Carbon Filter

Time (min)	Density of NH <sub>3</sub> (mg/m <sup>3</sup> )	NH <sub>3</sub> Removal Rate (%)
0	3.17	—
30	0.51	83.81
60	0.28	91.17
120	0.22	93.06

Dust Removal Ratio of Electrostatic Fibre Filter

## BIO Filter

BIO filter has a high photo catalyzing power, which can absorb and deactivate unpleasant odors, virus, formaldehyde and other chemical vapors. The Nano-meter catalyst can restore the deodorizing function by only exposing to the sunlight.

## Nano Silver Filter

Nano silver filter can destroy the cell-film of bacterium or strongly absorb the SH group of the protein in bacterium, the killing rate is higher than 99%.

## Vitamin C Filter

Vitamin C filter is using VC emission material, which can bring Vitamin C to the air, soften the skin and reduce your pressure, like a spa of air.

Progress of "Vitamin-C emission" every 6 hours

Performance of the emission in case of continuous running

# Intelligence & Efficiency

## Sleep Mode

In sleep mode, the setting temperature increases (cooling) 1°C or decreases (heating) 2°C per hour automatically in first two hours after setting sleep mode, which helps to achieve for the user the most comfortable temperature and save energy as well.

## Turbo

Turbo function can cool down or warm up the room to the setting temperature in a shortest time.

## Auto Restart

In case of power off, the microcomputer chip will memorize the running mode, and air con can restart with previous running mode automatically when power resumes.

## Strong Dehumidification

It is usually used in rainy days or damp area. By operating dehumidifying mode, the room can achieve comfortable humidity level for the user without reducing room temperature.

## Anti-rust Outdoor Casing

The outdoor unit casing is made from electrolytic zinc steel sheet.

## Inner Grooved Copper Tube

Superior inner-grooved copper tube makes refrigerant flow much faster in the copper tube, and enhance heat-exchange efficiency up to 30%-50% compared with the traditional smooth copper tube.

## Low Noise Air Flow System Large Diameter Cross Fan

Without decreasing the flow volume, the large diameter cross fan can reduce indoor unit's noise greatly.

## Valve Protection Cover

It protects the valves and prevents waters.

## Temperature Compensation (heating mode)

During heating mode, the ceiling temperature is usually quite higher than the floor temperature. So when the indoor unit is running at a temperature set by user, the floor temperature is actually lower than the setting one. But with temperature compensation function, the temperature difference can be eliminated, and you can enjoy the real temperature set by you.

## Anti-cold Air Function

When starting the heating function, the indoor fan starts only when the pipe temperature is high enough, so as to avoid the uncomfortable cold air blowing to the user.

## Self-diagnosis and Auto-protection Function

With self-diagnosis function, errors will be detected by microcomputer chips and displayed by LED on the indoor unit. Protection will then be automatically taken.

## Hydrophilic Aluminium Fin

The hydrophilic aluminium fin of the evaporator and condenser can make the condensed water flow freely between the fins and then help to improve the cooling efficiency. Also it can improve the heating efficiency by accelerating the defrosting process.

## Condenser Heating Kits

Condenser heating kits help the condenser free from getting frozen during heating mode in low temperature winter, then the air conditioner can run heating mode properly.

## Low Ambient Kit

The unit can be operated in cooling mode at low ambient temperature conditions.

## LED Display

It helps the user monitor and operate the unit clearly and easily.

## Soft Start Kit

The starting current is limited within 45A. This is to avoid the sudden high current when starting running air conditioner, and then protect the electricity equipment.

## Easy Wiring Connection

The integrated terminal board contributes to a quick and simple cable connecting the indoor and outdoor units.

## Compressor Heating Kits

During winter with extremely low temperature, the compressor is easy to get frozen and then hardly get started. But with compressor heating kits, the compressor can be warmed up slowly and then get started properly.

## Quick Connector

With quick connector system consumers can install the air conditioner by themselves. They just need to connect easily the specially designed copper pipe connector and signal wire connector. And it does not require professional tools. Quick connector can save a lot of time and installation fee.

## Air Quality Detector (optional)

The air quality detector can detect various room air pollution like formaldehyde, benzene, smoke, etc. If the pollution reaches a certain level which may do harm to people, the indoor unit will give the user a warning signal.

## Clean Warning (optional)

After a long time of using an air conditioner, the filters in side get dirty and polluted by covering with dust, house mites, bacteria, etc. Clean Warning function can automatically give you a signal to clean the filters when they get dirty and polluted.

## Auto Clean (optional)

One of the main causes of odour emitting from an air conditioner is the mould and bacteria breeding on the evaporator. Auto Clean function can clean the evaporator automatically and reduce the possibility of mould and bacteria breeding inside the air conditioner. On the other hand, cleaning evaporator helps the air conditioner keep working efficiently and save energy.

## Plasma Filter (optional)

The Plasma can create an ionization zone. When the polluted air gets through the ionization zone, the microscopic contaminants can be eliminated efficiently. It can reduce not only the dust, but also smoke, house mites, pollen, pet fur, and then reduce user's allergy and asthma symptoms.

## Sleep Care

Sleep care is a precise and intelligent technology for sleeping. It provides different sleep modes for different users like adults, children and elders. With sleep care function, users can have more comfortable sleeping.
